

If your rod or wire component needs it, we can thread it.

It's a simple process, but not one a lot of metal-working suppliers offer as a service these days. At Wisconsin Stamping & Manufacturing, we seek to provide virtually every metal working service in-house in order to deliver better components faster. Our equipment enables thread-rolling in a variety of thread-count configurations and knurling in a variety of metals. If needed, larger diameters can be machined on our CNC equipment.

Materials

- Cold Rolled Steel
- Stainless Steel
- Aluminum
- Hot Rolled Steel
- Brass
- Chrome Alloys
- Bronze
- Copper
- Other Malleable Metals

Finish Options

- Zinc: Clear/Yellow/Black
